

Coolroom panels

Built-in antibacterial protection for coolrooms
& food preparation areas

Protect the health of your business and the hygiene of your coolroom

Only COLORBOND® Permagard® steel combines proven strength and durability with Microban®, the global leader in built-in antimicrobial product protection.

The standard product that's anything but

COLORBOND® Permagard® steel is the standard product offering from BlueScope Steel and includes Microban® antibacterial technology as a standard inclusion.

How your business benefits

In conjunction with your standard hygiene practices, COLORBOND® Permagard® steel helps reduce the risk of cross-contamination, providing you and your customers with greater peace of mind.

Why Microban®?

Microban® is a unique antibacterial technology that actively helps reduce the risk of cross-contamination – and it is incorporated into the coating of COLORBOND® Permagard® steel, exclusively in the Australian market.

Microban® inhibits the growth of surface bacteria that may cause potential odours, stains, food poisoning and allergies. It won't wash off during your regular cleaning routines and even after 10 years of simulated washing with typical coolroom detergents, is still highly effective.

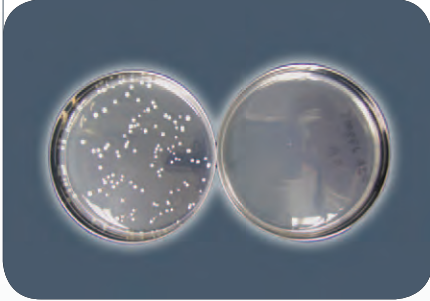

Microban® is used throughout the world in numerous food contact applications and environments – and complies fully with FDA, EUSCF, and local standards.

Only by specifying COLORBOND® Permagard® steel with Microban® will you ensure your hygiene sensitive areas receive the ultimate in antibacterial protection.

Microban and the Microban symbols are trademarks of the Microban Products Company, Huntersville, NC.

Actual images of Agar plates used in testing procedure. Plate on right shows the absence of cultured bacteria from the COLORBOND® Permagard® steel sample. For more details on test procedure and results, please visit colorbond.com/permagard

Independently tested here and overseas

Importantly for the health of your clients, and your business, panels made from COLORBOND® Permagard® steel pass the most rigorous testing.

In the UK, they tested effective against *Staphylococcus aureus* and *Escherichia coli* 0157. Tests were conducted in accordance with JIS Z 2801:2000 – the globally recognised benchmark and most widely used protocol for testing antibacterial performance.

COLORBOND® Permagard® steel is certified by HACCP Australia, an independent food safety programme and testing organisation.

Helps with cleaning

Nothing replaces your regular cleaning routines and sanitising schedules.

However, you'll find COLORBOND® Permagard® steel helps protect those hard-to-clean areas and requires no additional cleaning procedures or special cleaning products.

Plus you can be confident that your overall microbiological loading between cleanings is lessened by the 24 hour-a-day antibacterial action of Microban®.

Highest standards

Only COLORBOND® Permagard® steel is guaranteed by BlueScope Steel to meet Australian Standards AS2728, ensuring our standard product offering for coolroom panels always meets the highest standards.

Large or small areas

When you have hygiene sensitive environments to protect, no matter what sized area, rely on COLORBOND® Permagard® steel.

It's designed for use in coolrooms and food preparation areas within supermarkets, retailers, abattoirs and processing facilities.
